PROFESSIONAL SUMMARY

Front-end and cross-platform engineer with 5+ years of experience building production web and mobile products in fintech, travel booking, telehealth and consumer apps. Built and led a Next.js, NestJS and TypeScript platform that distributed over €2,000,000 in startup funding. Focused on performance (made flight search 2x faster) and on small, continuously releasable changes. Native Arabic speaker with experience building multilingual applications. Works closely with product, design, backend and QA to turn requirements into polished, fast interfaces.

CORE SKILLS

Front-End: JavaScript, TypeScript, Next.js (React), HTML, CSS, Tailwind CSS, responsive design, performance profiling, memory-leak debugging

APIs and Backend: GraphQL, RESTful APIs, NestJS (Node.js), Socket.IO, WebRTC

Testing and Quality: Unit, integration and end-to-end testing, TDD, code reviews, pair programming

CI/CD and Delivery: Git, GitHub Actions, Fastlane, Codemagic, Docker, trunk-based development, feature flags, A/B testing

Architecture: Clean Architecture, MVVM, SOLID, continuous refactoring

Mobile: Flutter, Dart, Android SDK (Java, Kotlin), Firebase, Bloc, Riverpod, Provider

Languages: Arabic (native), English (upper-intermediate / advanced)

WORK EXPERIENCE

Software Engineer – Flutter | Al Maktoum Neo Tech | Dubai, UAE | May 2024 – July 2026

- Built core modules of a Flutter flight-booking web app, integrating third-party payment gateways with secure crypto and card payment flows.
- Investigated performance bottlenecks and memory leaks using profiling tools, making flight search 2x faster and reducing the production crash rate.
- Owned end-to-end delivery of features for NeoOne, a production mobile banking app with blockchain crypto payments and open banking.
- Led an incremental refactor of routing from GetX to GoRouter, simplifying navigation, deep linking and long-term maintainability.
- Collaborated with product, design, backend and QA to clarify requirements and align solutions with business outcomes.

Software Developer – Full-Stack | 249Startups | Cairo, Egypt | March 2023 – July 2024

- Built and led the Venture X platform (Next.js, NestJS, TypeScript) powering the Gaith funding program, which distributed over €2,000,000 to funded startups.
- Increased operational efficiency by 70% by engineering automated workflows across investor, applicant and staff processes.
- Designed fund-tracking systems that let third-party investors monitor fund distribution across multi-step approval flows.

Software Engineer – Flutter | Fekra | Khartoum, Sudan | December 2021 – January 2023

- Mentored a team of four junior developers through pairing, code reviews and coaching on Dart, Git and clean architecture.
- Partnered with stakeholders to break requirements into small batches and align delivery with business goals.
- Delivered Soqia, a two-app product for donating water to mosques, with a companion delivery-management app.

Software Developer | Exit Fund | Khartoum, Sudan | December 2020 – November 2021

- Refined DoctorBase, a telehealth app, streamlining virtual consultations and lifting app-store ratings.
- Optimized chat with efficient file management and visual communication features, driving higher user engagement.

Android Developer | Fekra | Khartoum, Sudan | May 2019 – April 2020

- Led development of Simsimy, a parental-control solution made of two native Android apps (Java), including time-based app restrictions and remote device management.

PROJECTS

Manga Online (Google Play) | January 2019 – April 2024

- Built a comic-reading app, later migrated from native Android to Flutter, reaching 1.95M downloads and 120K+ monthly active users.
- Maintained a 98% crash-free rate with Firebase Crashlytics and used analytics to drive iterative UX improvements.
- Owned CI/CD, release management, staged rollouts and deployment end to end.

Bibliotheque | March 2023 – May 2023

- Built a mobile bookshop app with multilingual support using fast_i18n localization.

EDUCATION

Bachelor of Science in Civil Engineering | University of Khartoum, Sudan | 2021

PUBLICATIONS

Two peer-reviewed papers on neural-network prediction in civil engineering, Proceedings of the 10th ICAT Conference, 2022.
